15. *The impact of economic reforms on foreign exchange reserves has grown faster in post reform period . India ' s forex reserves become seventh largest in the world at the end of 2002 . The high level of foreign exchange reserves has given rise to a suggestion in some quarters that this can be used to finance infrastructure projects . The nature of the reserves is an important consideration in evaluating the merits of the suggestion . It is generally desirable to finance domestic infrastructure investments from local resource and substitution of this by draw down of foreign exchange reserves may imply monetisation of inflations and a relook at FRMB prescription of RBI loans to government . The finance minister appears to have made a cautious start in the 2005-06 budgets and attention should turn to choice of projects and their sectoral implication . CHAPTER V. (2005).*
